Repair Instruction

- Top lift up handle section -

To repair your Tutto bag, you will need the following:

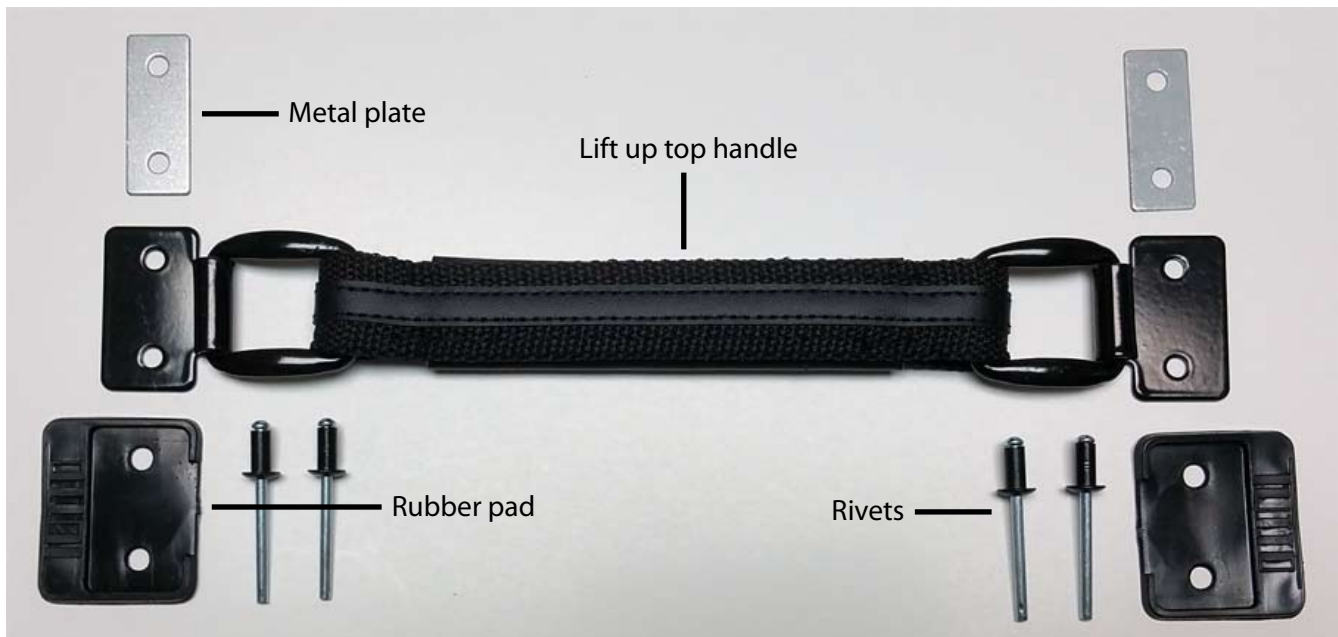

- A. Rivet gun
- or
- B. Hand rivet tool
- C. Power drill

A.

B.

C.

The best way to replace the top handle or only repairing the missing rivet is to puncture 2 small holes through the fabric lining instead of unstitching the lining. Optional if you want to paint the metal plate black to match inside lining color.

- 1.) If removing existing rivets, drill the old rivets out from the top. If not, skip to step 2.
- 2.) Puncture a small hole through the lining.
- 3.) Place the rubber pad on the top over the 2 holes.
- 4.) Place the lift up handle metal end over the rubber pad, lining up the 2 holes.
- 5.) Place a rivet in one of the holes, then place the metal plate inside aligning with the 2 holes.
- 6.) With a rivet tool pop the rivet in. Do the same for the other rivet.
- 7.) When finished, should look like pictures below.
